NOW THERE'S A NATURALLY  
COMFORTABLE CONTACT LENS

# NATURE'S ESSENTIAL ELEMENTS TOGETHER LIKE NEVER BEFORE. A LEVEL OF COMFORT YOU NEVER THOUGHT POSSIBLE.

New Biofinity™ contact lenses are made from a unique, naturally water-loving

material that helps them stay moist and comfortable all day long.

Biofinity's revolutionary lens material is also highly breathable, allowing greater levels of oxygen to freely flow through the lens — keeping your eyes clear, white, and healthy looking.

The secret is CooperVision's patented Aquaform™ technology, which optimizes the relationship

between oxygen and water, creating a softer, more flexible lens material.

It all adds up to a naturally comfortable lens with no additives, coatings, wetting agents, or surface treatments. Nothing comes between you and a more comfortable lens-wearing experience.

*Make sure you're enjoying the best contact lens-wearing experience possible ~ ask your eye care professional about new Biofinity contact lenses.*
