

What is a hybrid lens?

Remember when you had only two choices in contact lenses? "Hard" (RGP) lenses provided GOOD vision, but were often irritating and uncomfortable. Soft lenses offered GOOD comfort, but couldn't correct your vision problems.

Now, a technological breakthrough makes having to compromise a thing of the past. Hybrid contact lenses offer all the benefits of RGP and soft contact lenses without any of the disadvantages for an overall GREAT contact lens experience.

All-day Comfort & Clarity

Is ClearKone® right for you?

Whether you wear traditional soft or rigid contact lenses, or if you are wearing both at the same time, chances are you have experienced...

- Poor, unstable vision
- Discomfort
- Lenses popping out
- Dirt under your lenses
- Decreased wear time
- Light sensitivity and glare
- Inconvenience
- Poor eye health

Now, you have a treatment option that will provide consistently clear vision, all day comfort and be healthy for your eyes!

ClearKone® Changes Lives

Finally, I can see all day.

introducing

ClearKone® hybrid contact lenses for keratoconus

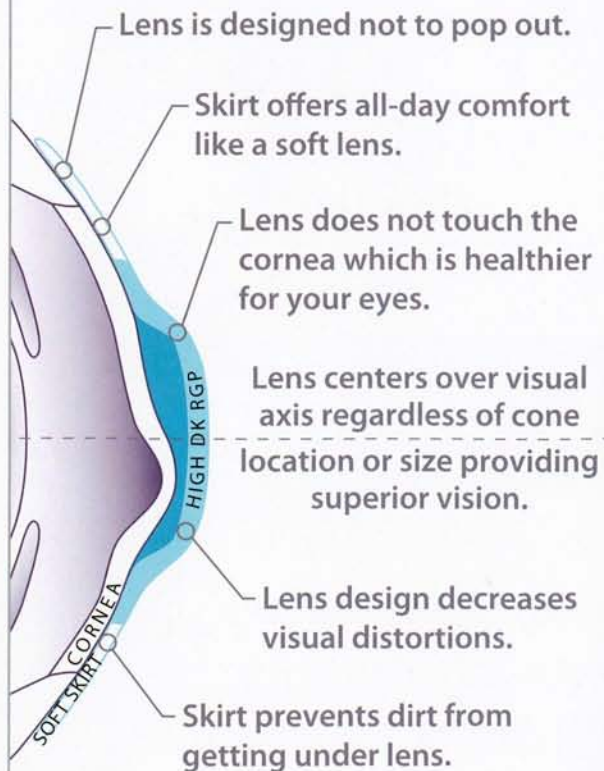

- Consistently clear vision
- All-day comfort
- Healthy for your eyes
- Award-winning keratoconus treatment

One Lens Does it All

Why choose ClearKone®?

ClearKone® is a revolutionary FDA-cleared hybrid contact lens specifically designed for the treatment of keratoconus. ClearKone® truly offers the best of both worlds – the crisp vision of a rigid gas permeable (RGP) contact lens with the all-day comfort and convenience of a soft lens. ClearKone® is specifically designed to restore vision to patients with the many types and stages of keratoconus.

ClearKone® - One Lens Does it All

All-day Comfort & Clarity

FAQ's

What is keratoconus?

Keratoconus is a degenerative eye disease that causes the cornea to thin and bulge, creating a cone-like shape which can result in significant visual impairment.

What are my contact lens choices?

Hybrid Contact Lenses combine a soft and RGP lens together to provide superior visual acuity, all-day comfort and freedom from having to worry about dirt getting under your lenses or the lenses popping out.

RGP Lenses can provide adequate vision if it is possible to center the lens on the visual axis. RGPs are often uncomfortable, inconvenient, allow dirt to be trapped under the lens and may pop out.

Scleral Lenses are very large RGP lenses that can provide adequate vision but often require very precise and skilled fitting by your eye care professional. Sclerals occasionally have to be removed and reinserted with fresh saline during the day to keep your vision clear and comfortable.

Soft Lenses are comfortable but are usually unable to visually normalize the irregularities of the keratoconic cornea and therefore do not provide acceptable vision.

Piggyback Lenses are RGP and soft lenses that are worn at the same time. Not only can this be cumbersome to handle and care for, but possible eye health issues can occur due to the oxygen permeability through two lenses.

Who is a good candidate for ClearKone®?

- Newly diagnosed keratoconus patients or patients with other corneal irregularities.
- Patients that aren't satisfied with the vision or comfort of their current lens.
- Patients that are considering surgery.
- Patients that have had a surgical procedure.

One Lens Does it All

Keratoconus Patient Testimonials

"My life has changed dramatically."

"Since wearing ClearKone® lenses my everyday life has changed dramatically. Every issue I had with my RGPs has been rectified. No longer does dust, wind, or water affect my lifestyle. I have gained a sense of freedom. Above all else, my vision has improved and my lenses are much more stable and comfortable. With ClearKone®, I am able to comfortably enjoy the benefits of hybrid lenses all day."

- Johnny Sledevick

"My vision went from 20/300 to 20/20."

"I was pleasantly surprised the moment my doctor put ClearKone® on my eyes. I couldn't even tell that they were on my eyes and they stayed right where they were supposed to, not popping out or shifting like past contacts I have tried. I went from 20/300 vision to 20/20. This is the best I have ever been able to see!"

-Erin Howard

"Most comfortable lenses I have ever worn."

"About seven years ago I was diagnosed with keratoconus. Since that time I have tried every type of contact lens with no positive result. I would only be able to wear them for small periods of time, finding them to be too uncomfortable to bare. Recently my doctor fitted me in ClearKone®. I have to say they are the most comfortable lenses I have ever worn. I am able to wear them all day."

-Eduardo Moreno
